

By the Numbers

100 Percent US coverage

1 National call center

1,500 Vehicle fleet

National Accounts

IES understands that your success depends on your ability to remain online and operational. Our quick response dispatch, from a national, dedicated team of electrical and communications experts, is designed to service your needs—no matter the time or location.

IES services power quality monitoring, ground systems and branch circuits testing, power factor correction and infrared scanning. We also provide standby power generation and are fully qualified to test insulation and circuit test and trace, survey panel schedules and one-line diagrams. We provide modernization and upgrades, and can retrofit current energy management systems and lighting maintenance systems that may be required from ballast and lamp replacement to emergency exit and security lighting.

As businesses seek to make their operations more sustainable, IES is also leading the way in providing Solar and energy efficient modules, fixtures and electrical services.

Our success in handling the maintenance for national accounts across the US, our unwavering commitment to safety and our ability to respond to any level of technical complexity makes IES the perfect match to meet your electrical maintenance and repair needs.

Why you benefit

- Our preventive and scheduled electrical maintenance services reduce your downtime
- Our national call and dispatch operation can quickly restore emergency outages
- Our ability to serve you and your clients nationally can simplify your operations

Specialized Maintenance Services

- Design and Engineering
