

By the Numbers

4,000 Experienced employees

325 Million dollars of bonding and surety capacity

3 Our rank among electrical contractors nationwide

Overview

The US electric generation system is enormous with roughly 1,000 gigawatts (GW) of generating capacity currently in place. As current resource needs change and expand, the demand for—and energy available from—abundant, renewable solar energy is also enormous.

As companies seek more sustainable power and building solutions, IES powers progress through electrical design, engineering, installation and maintenance of all solar technologies. As the nation's third largest electrical contractor, our experience and expertise with industrial and commercial structures ensure a solid understanding of your needs as you implement your renewable energy goals. Our trained technicians work with your team collaboratively to safely and reliably complete your project on-budget and schedule.

One call to IES gives you access to the industry's best-trained personnel, strategically located throughout the US. And, you get the confidence of working with a stable publicly-traded (NASDAQ: IESC) company with the surety resources you need to move forward in uncertain economic times.

Why you benefit

- Our extensive experience and expertise keep your project on schedule
- Our broad coverage ensures we are where you need
- Our Safety Record ensures attention to detail and improved project performance

IES Specialized Solar Services

- Electrical Design
- Electrical Installation
- Electrical and Lighting Retrofit
- Electrical Maintenance
